Thermo Electron Meters for Harvest Analysis

Harvest is quickly approaching and now is the time to think about adding or replacing pH meters in your winery laboratory. Every year, there are advances in meters and electrodes that make analysis quicker, easier, and more accurate. Thermo Orion has combined these advances into their new Star Series which is now available through Vinqury. This new series also features flexibility in the type of meter that is available to winemakers. The Star Series comes in the following configurations:

- The **3-Star Meter** provides pH, DO, or conductivity measurement only.
- **4-Star Meters** provide dual-parameter measurement of pH along with dissolved oxygen (DO), ISE (ion selective electrode) or conductivity.
- The **5-Star Meter** provides multi-parameter measurement including pH, DO, ISE, and conductivity.

Each meter is available in benchtop and waterproof portable models. Benchtop meter kits include the meters, electrodes*, and standards required for analysis, an ATC probe, electrode storage solution, and pH buffers. The portable meter kit includes all of the above along with a field case. (A **2-Star Meter** is also available without an ATC probe and kit items)

Call Vinqury at 707-838-6312 for further information on pH meters and accessories.

*ISE electrodes and reagents require separate purchase.
