Vinquiry is Sparkling!

Vinquiry is now the exclusive distributor for the **Station Oenotechnique de Champagne** brands of sparkling wine products. The **SOEC** line is for tradition Methode Champenoise production and the **Charme** line is for the Charmat, or closed tank method. Each brand includes a wide range of products from active dry yeasts to adjuvants and clarifying agents. The following are some of the new products that Vinquiry offers:

SOEC for Methode Champenoise:

- **Adjuvant 83 Powder**, a blend of bentonite and mineral colloids, is used to clarify bottled wine during secondary fermentation.
- **Adjuvant 92 Powder** contains alginic and mineral colloids prepared from several carefully selected bentonite and alginates. Designed for ultra-rapid riddling by the Gyropalette method.
- **Amplitan Tirage** is a blend of tannins, inactivated yeast and yeast hulls. Assists in bottle fining and improves structure, roundness and foaming potential.
- **Clar T Tirage**, a blend of gallnut and chestnut tannins, protects the structure and balance of wine when added at the time of bottling.
- **Clar T Special Tirage** is a blend of gallnut and chestnut tannins supplemented with copper ions to prevent reduction characteristics.
- **Complex A.N. Liquid** improves riddling and results in a more compact deposit when used as a complement to classical shaking adjuvants.

Charme for the Charmat method:

- **Stabicharme** is bentonite mixed with specific fining agents for protein removal in base wines. It also promotes the preservation of foaming potential.
- Other Charme products including nutrients and yeast are available.

More information on the complete line of **SOEC** and **Charme** sparkling wine products will soon be available on this website under the products section.
